SOUTH WINDSOR PUBLIC SCHOOLS TECHNOLOGY HELPFUL TIPS

Home Internet Slow?

What's your Wi-Fi signal strength?

In general, the closer you are to your router, the better the signal.

Check online with your router manufacturer to see if you have the latest updates.

You may have apps open on your device that are operating in the background and slowing your system down.

Check your connection speed online. Contact your ISP (Internet Service Provider) if slow.

How many people are sharing your Internet connection?

The fewer, the better.

- Power off and restart your Chromebook regularly.
- Make sure that it is charged fully each day.
- Keep open tabs to a minimum when using Google Meet.
